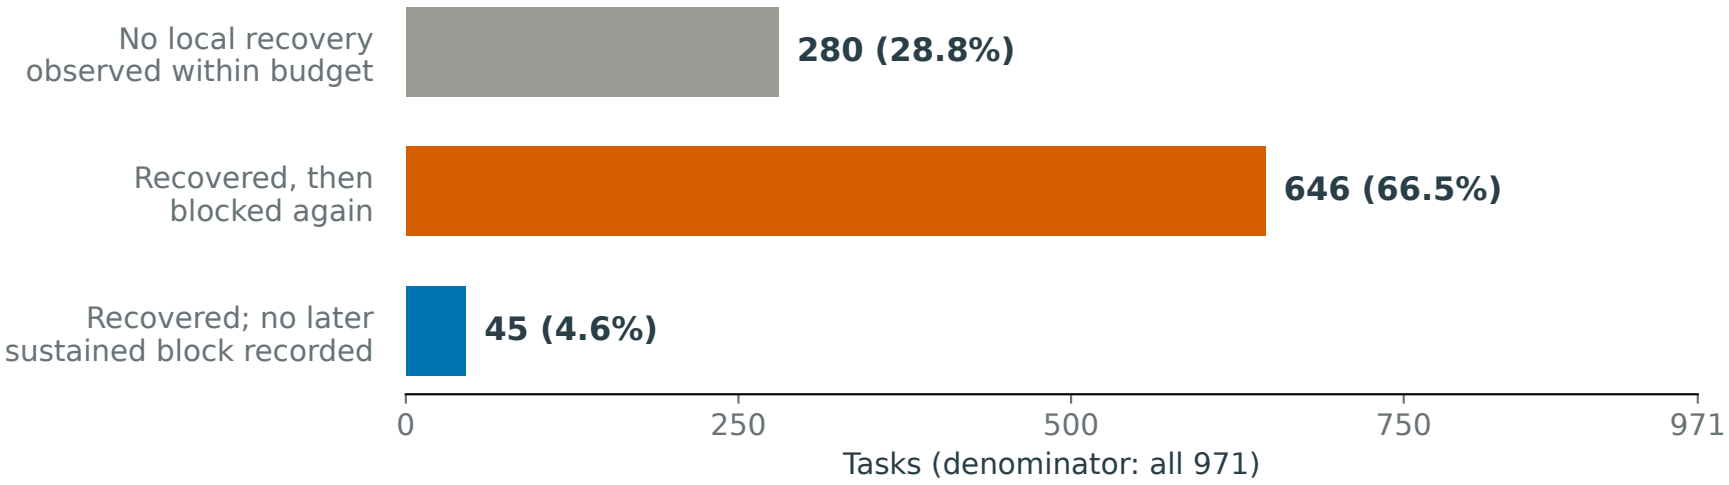
Type 1 failures: recovery is often delayed and unstable

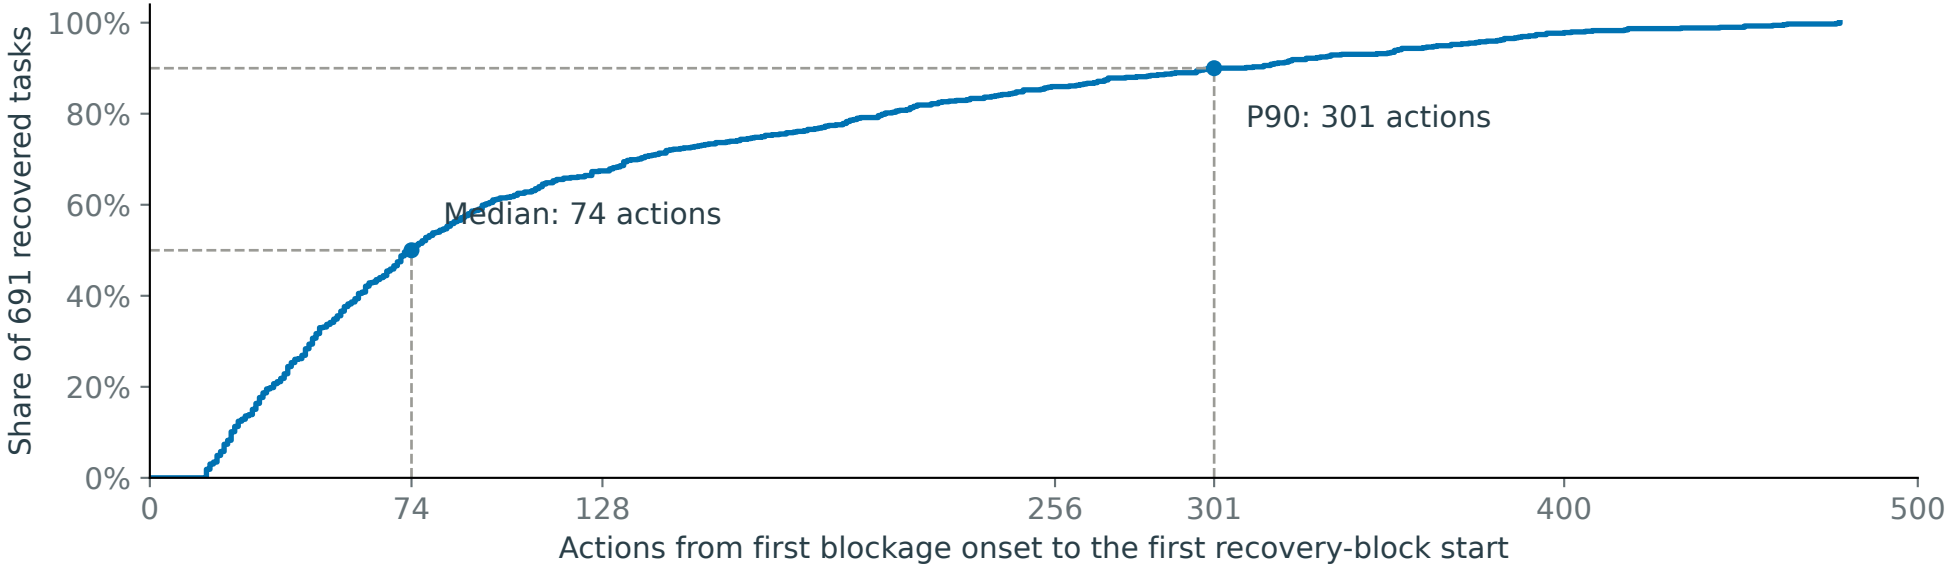
971 failed tasks | 500-action budget | unchanged original policy and execution logs

A Mutually exclusive observed outcomes



691 / 971 recovered at least once (71.2%); 646 / 691 later reblocked (93.5%).

B Waiting time among the 691 locally recovered tasks



Recovery: a full 8-action query, no collision, >= 5 mm per action, net XY >= 0.2 m.

Local movement is not goal-directed recovery. Unrecovered tasks are excluded from the waiting-time curve.
